Profile

Aspiring software developer with practical experience developing web applications and digital products. I work extensively with modern web technologies and develop personal projects from the initial idea through implementation and deployment.

Through my projects, I have gained practical experience in frontend and backend development, databases, authentication, APIs, and real-time communication. I am particularly interested in software development, artificial intelligence, and modern web applications.

Projects

- | | |
|---|--------------|
| <i>TuningHub – Marketplace Platform</i> | 2025–present |
| <ul style="list-style-type: none">○ Developed and continuously improved a web platform with more than 500 registered users○ Implemented listings, search, item management, and user interaction○ Implemented authentication, database, and storage using Supabase○ Developed structured search functionality and backend features○ Deployed and continuously maintained the web application | |
